

See the risk before it reaches your portfolio.

Your money. In perspective.

Rates change. Inflation surprises. Your investments react.

Folio shows what could happen next and what it could mean for your money.

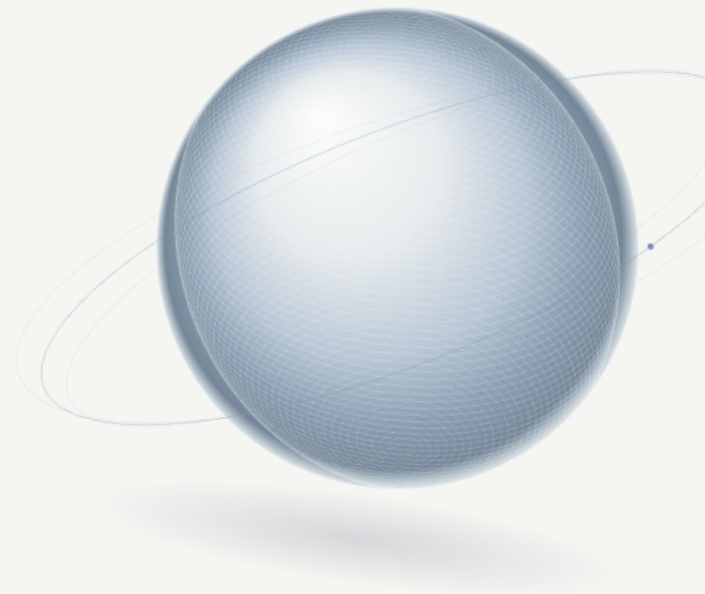

For people making investment decisions.

35–45 · Self-directed investors

Managing their own money. Wanting clarity without hours of research.

Wealth managers: explain risk to clients before they ask about the headlines.

Then expand to firms and teams managing portfolios for others.

Premium annual plans.

\$3,000

USD / YEAR

Investor

Understand risks to your own portfolio.

\$5,000

USD / YEAR

Adviser

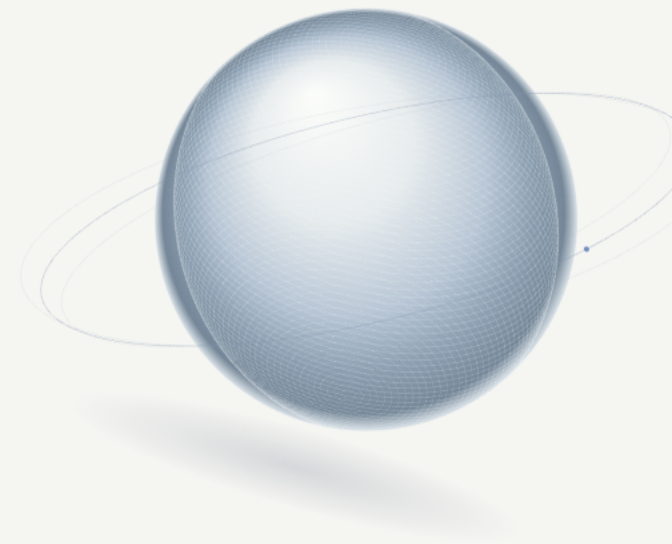

Review client portfolios and explain risks.

\$10,000

USD / YEAR

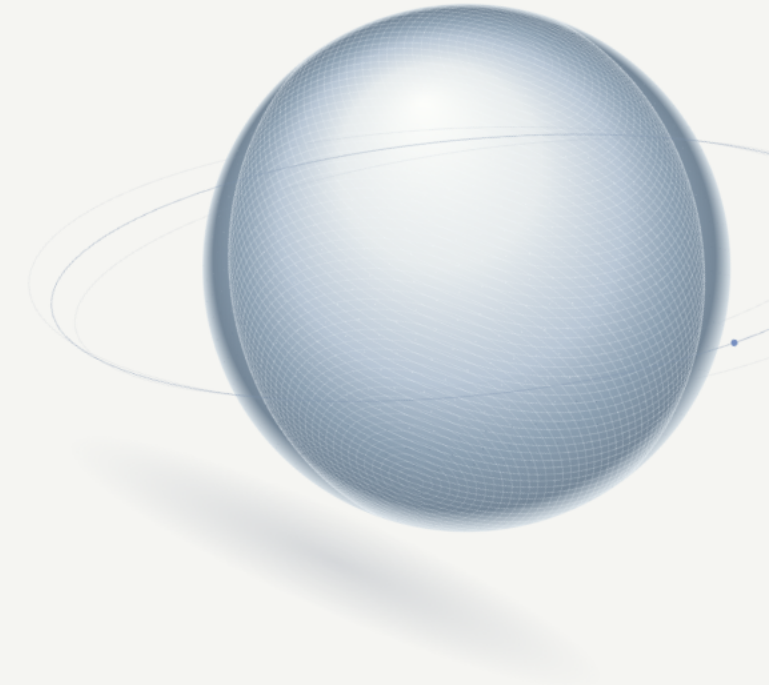

Firm

Equip a team managing money for others.

Earn trust with their own portfolio.

- 01 Show an upcoming event and their exposure.
- 02 Turn the first useful insight into an annual plan.
- 03 Help wealth managers explain the same risk to clients.

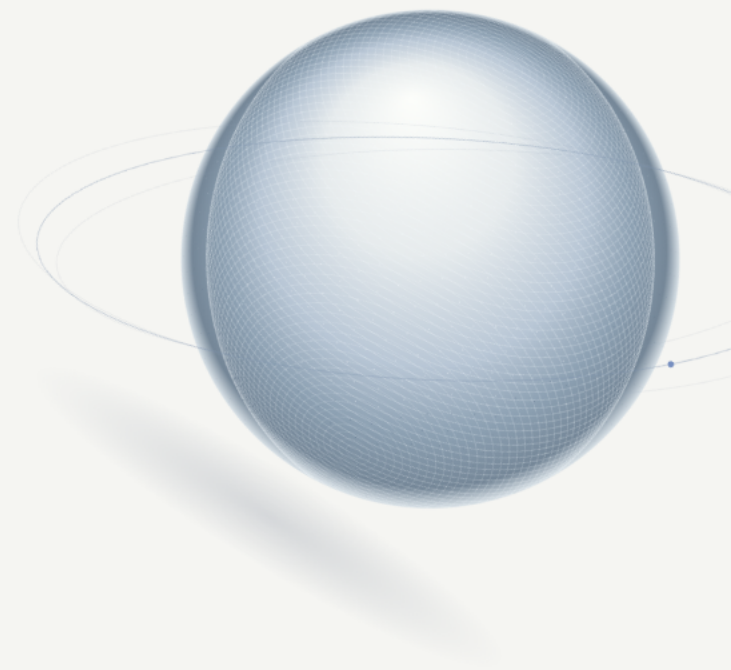

Vikas — Founder, Knoww.app

Built during the hackathon

Collect the signals: news, economic releases and online discussion.

Make them personal: a visual map, upcoming events and portfolio scenarios.

Jev connects evidence to events and can say “not enough evidence.”

The science, in everyday language.

Bayesian updating

Does new evidence change the odds?

Today: historical probabilities and AI evidence checks.

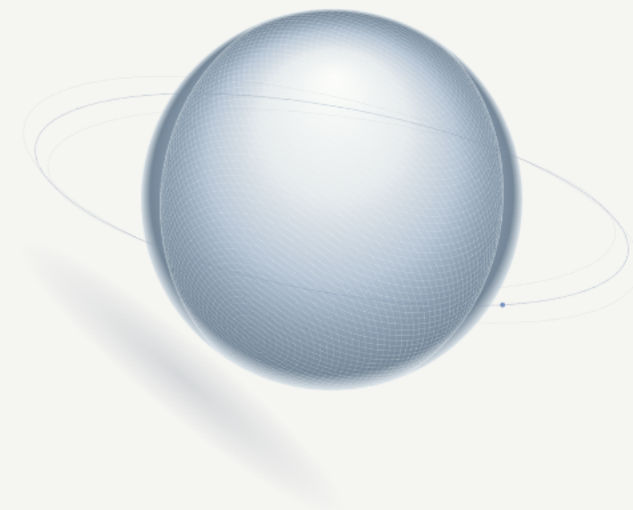

Next: validated updates from news.

Pearl's do-operator

What if we changed just this cause?

Today: assumed portfolio scenarios.

Next: estimate causal effects, accounting for other influences.

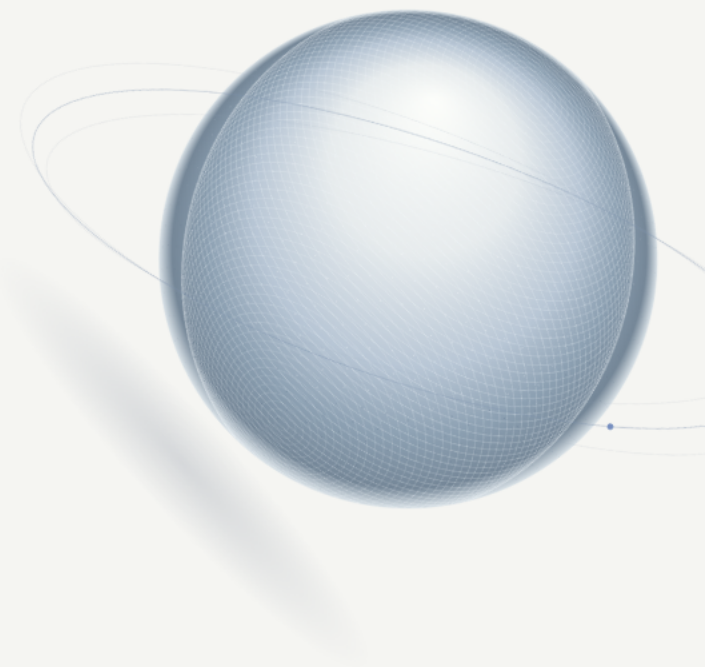

A focused path to \$140K a year.

33 customers. \$140,000 annual revenue.

20 investors at \$3,000 → \$60,000

10 advisers at \$5,000 → \$50,000

3 firms at \$10,000 → \$30,000

A clearer decision before the next market event.

For investors: see your risk. For advisers: explain it.
